Re: Engineering position

Hello!

I recently moved to Tustin with my girlfriend and I'm looking for work. My strong background in development environments and electronics will allow me to excel in this role, and my experience with consulting and digital solutions will make me an integral and flexible part of your team.

I received my BSEE from USC in 2010. I studied programming, DSP, audio, and circuit design. As an Electronics Engineer, I wrote bare-metal embedded code for video processors and ARM microcontrollers, which involved market research, R&D, DSP, and UI/UX design. As a Solutions Engineer, I have designed, constructed, and deployed custom Enterprise software solutions. As a Computer Architect, I have built bespoke machines custom-designed to fit customer budgets and use-cases. I offer a very personal experience wherein customers are encouraged to participate actively in the design process.

I have professional or personal experience with C, C+, C#, Java, Python, Perl, Ruby, HTML, XML, CSS, JavaScript, json, Chrome extensions, Android apps, and other tech. I am detail oriented and I educate myself very thoroughly.

Please contact me for an interview.

Thank you for your consideration,

Michael Hillendahl
